| Clause                   | Requirement - Test |  | Result - Remark | Verdict |

|         | CENELEC COMMON MODIFICATIONS  |     |
|---------|---|-----|
| 6.1     | Delete "class 0" and "class 01"   | N/A |
| 7.1     | Single-phase appliances to be connected to the supply mains: 230 V covered  | Р   |
|         | Multi-phase appliances to be connected to the supply mains: 400 V covered   | N/A |
| 7.10    | Devices used to start/stop operational functions of<br>the appliance distinguished from other manual<br>devices by means of shape, size, surface texture,<br>position, etc.   | P   |
|         | An indication that the device has been operated is given by:  | Р   |
|         | • a tactile feedback, or  | N/A |
|         | an audible and visual feedback  | Р   |
| 7.12    | The instructions include the substance of the following:  | Р   |
|         | - this appliance can be used by children aged from<br>8 years and above and persons with reduced<br>physical, sensory or mental capabilities or lack of<br>experience and knowledge if they have been given<br>supervision or instruction concerning use of the<br>appliance in a safe way and understand the hazards<br>involved | P   |
|         | - children shall not play with the appliance  | Р   |
|         | - cleaning and user maintenance shall not be made<br>by children without supervision  | Р   |
| 7.12.Z1 | The specific instructions related to the safe<br>operation of this appliance is collated together in the<br>front section of the user instructions  | P   |
|         | The height of the characters, measured on the capital letters, is at least 3 mm   | P   |
|         | These instructions are also available in an alternative format, e.g. on a website   | Р   |
| 8.1.1   | Also test probe 18 of EN 61032 is applied   | Р   |
|         | The appliance being in every possible position during the test  | Р   |
|         | The force on the probe in the straight position is increased to 10 N when probe 18 is used  | Р   |
|         | When using test probe 18 the appliance is fully assembled as in normal use without any parts removed, and   | P   |

|--------|--|-----------------|---------|
| Clause | Requirement - Test   | Result - Remark | Verdict |
|        | parts intended to be removed for user maintenance are also not removed   |                 | Р       |
| 8.2    | Compliance is checked by applying the test probes of EN 61032  |                 | Р       |
|        | For built-in appliances and fixed appliances, the test<br>probe B and probe 18 of EN 61032 are applied only<br>after installation  |                 | N/A     |
| 11.8   | Footnotes to "External enclosure of motor-operated appliances" to be taken into account  |                 | Р       |
| 15.1.2 | Appliances with an automatic cord reel tested with<br>the cord in the most unfavourable position so that<br>the reeling of the wet cord may affect electrical<br>insulation during operation, the cord not being dried<br>before reeling |                 | N/A     |
| 20.2   | When using the test probe similar to test probe B with a circular stop face, the accessories and detachable covers are removed   |                 | Ρ       |
|        | Test probe 18 applied with a force of 2,5N on the appliance fully assembled  |                 | Р       |
| 24.1   | Components comply with the safety requirements specified in the relevant standards as far as they reasonably apply   |                 | Р       |
|        | The requirements of Clause 29 of this standard apply between live parts of components and accessible parts of the appliance.   |                 | Ρ       |
|        | The requirements of 30.2 of this standard apply to<br>parts of non-metallic material in components<br>including parts of non-metallic material supporting<br>current-carrying connections inside components                              |                 | Ρ       |
|        | Components that have not been previously tested<br>or do not comply with the standard for the relevant<br>component are tested according to the<br>requirements of 30.2  |                 | Ρ       |
|        | Components that have been previously tested and sh<br>resistance to fire requirements in the standard for the<br>be retested provided that:  |                 | N/A     |
|        | - the severity specified in the component standard is not less than the severity specified in 30.2, and  |                 | N/A     |
|        | - the test report for the component states whether it<br>complied with the standard for the relevant<br>component with or without flame, flames not<br>exceeding 2 s during the test are ignored   |                 | N/A     |

Page 4 of 15

IEC60335\_1T - ATTACHMENT

| Clause | Requirement - Test   | Result - Remark | Verdict |
|--------|--|-----------------|---------|
|        | Unless components have been previously tested<br>and found to comply with the relevant standard for<br>the number of cycles specified, they are tested in<br>accordance with 24.1.1 to 24.1.9  |                 | N/A     |
|        | For components mentioned in 24.1.1 to 24.1.9, no additional tests specified in the relevant standard for the component are necessary other than those specified in 24.1.1 to 24.1.9  |                 | N/A     |
|        | Components that have not been separately tested and found to comply with the relevant standard, and  |                 | N/A     |
|        | components that are not marked or not used in accordance with their marking,   |                 | N/A     |
|        | are tested in accordance with the conditions<br>occurring in the appliance, the number of samples<br>being that required by the relevant standard  |                 | N/A     |
|        | Lamp holders and starter holders that have not<br>been previously tested and found to comply with the<br>relevant standard are tested as a part of the<br>appliance and additionally comply with the gauging<br>and interchangeability requirements of the relevant<br>standard under the conditions occurring in the<br>appliance |                 | N/A     |
|        | Where the relevant standard specifies these<br>gauging and interchangeability requirements at<br>elevated temperatures, the temperatures measured<br>during the tests of Clause 11 are used  |                 | N/A     |
|        | Plugs and socket-outlets and other connecting<br>devices of interconnection cords are not<br>interchangeable with plugs and socket-outlets listed<br>in IEC/TR 60083 or IEC 60906-1, or  |                 | N/A     |
|        | with connectors and appliance inlets complying with the standard sheets of IEC 60320-1,  |                 | N/A     |
|        | if direct supply to these parts from the supply mains gives rise to a hazard   |                 | N/A     |
| 24.1.7 | If the remote operation of the appliance is via a telecommunication network, the relevant standard for the telecommunication interface circuitry in the appliance is EN 41003  |                 | N/A     |
|        | Compliance with Clause 8 of this standard is not impaired by connecting the appliance to a device covered by EN 41003  |                 | N/A     |

|                        |     |  |

| Clause  | Requirement - Test Result - Remark   | Verdict |
|---------|--|---------|
| 20.1    | Appliances and their components and fittings have<br>adequate mechanical stability during transportation,<br>assembly, dismantling and any other action<br>involving the appliance   | N/A     |
| 20.2    | Dangerous moving transmission parts safeguarded either by design or guards   | N/A     |
|         | When guards are used, they are fixed guards,<br>interlocking movable guards or protective devices  | N/A     |
|         | Moving parts directly involved in the function of the appliance which cannot be ma<br>completely inaccessible fitted with:   | ade N/A |
|         | - fixed guards or interlocking movable guards<br>preventing access to those sections of the parts<br>that are not used in the work, and  | N/A     |
|         | - adjustable guards restricting access to those sections of the moving parts where access is necessary   | N/A     |
|         | Interlocking movable guards used where frequent access is required   | N/A     |
| 21.1    | Appliances and their components and fittings have<br>adequate mechanical strength and is constructed to<br>withstand such rough handling that may be<br>expected in normal use, during transportation,<br>assembly, dismantling, scrapping and any other<br>action involving the appliance | N/A     |
| 22.ZE.1 | For appliances provided with a seat, the seat gives adequate stability   | N/A     |
|         | The distance between the seat and the control devices capable of being adapted to the operator   | N/A     |
| 22.ZE.2 | For appliances provided with separate devices for<br>the start and the stop functions, the stop function is<br>unambiguously identifiable and does always<br>override the start function   | N/A     |
|         | For appliances provided with one device performing<br>the start and the stop function, the stop function is<br>unambiguously identifiable and does always<br>override the start function   | N/A     |
| 22.ZE.3 | Appliances designed in such a way that incorrect<br>mounting is avoided, if this can lead to an unsafe<br>situation  | N/A     |
|         | If this is not possible, information on the correct<br>mounting is given directly on the part and/or the<br>enclosure  | N/A     |

| IEC60335_1T - ATTACHME   | INT             |         |
|--|-----------------|---------|
| Requirement - Test   | Result - Remark | Verdict |
|  |                 |         |
| Where the weight, size or shape prevents<br>appliances from being moved manually, they are<br>fitted with attachments for lifting gear, or |                 | N/A     |
| so designed that they can be fitted with such attachments, or  |                 | N/A     |
| be shaped in such a way that standard lifting gear can easily be used  |                 | N/A     |
| Appliances to be moved manually are constructed  |                 | N/A     |

|         | attachments, or  |     |
|---------|--|-----|
|         | be shaped in such a way that standard lifting gear can easily be used  | N/A |
|         | Appliances to be moved manually are constructed<br>or equipped so that they can be moved easily and<br>safely  | N/A |
| 22.ZE.5 | The fixing systems of fixed guards which prevent access to dangerous moving transmission parts only removable with the use of tools  | N/A |
|         | If such guards have to be removed by the user for<br>routine cleaning or maintenance their fixing systems<br>remain attached to the fixed guards or to the<br>machine after removal  | N/A |
|         | Where possible, guards are incapable of remaining in place without their fixings   | N/A |
|         | This does not apply if, after removal of the screws,<br>or if the component is incorrectly repositioned, the<br>appliance becomes inoperative  | N/A |
|         | Movable guards are interlocked   | N/A |
|         | The interlocking devices prevent the start of<br>hazardous appliance functions until the guards are<br>fixed in their position, and give a stop command<br>whenever they are no longer closed                                    | N/A |
|         | Where it is possible for an operator to reach the danger zone before the risk due to hazardous appliance functions has ceased, movable guards associated with a guard locking device in addition to an interlocking device that: | N/A |
|         | - prevents the start of hazardous appliance<br>functions until the guard is closed and locked, and   | N/A |
|         | - keeps the guard closed and locked until the risk of injury from the hazardous appliance functions has ceased   | N/A |
|         | Interlocking movable guards remain attached to the appliance when open, and  | N/A |
|         | they are designed and constructed in such a way<br>that they can be adjusted only by means of an<br>intentional action   | N/A |

| IEC60335_1T - ATTACHME   | ENT             |         |
|--|-----------------|---------|
| Requirement - Test   | Result - Remark | Verdict |
| Interlocking movable guards designed in such a way that the absence or failure of one of their components prevents starting or stops the hazardous appliance functions                     |                 | N/A     |
| The guard is opened to the extent needed to cause<br>the interlocking to operate and is then closed, the<br>number of operations being defined in the specific<br>Part 2                   |                 | N/A     |
| After this test any defect that may be expected in<br>normal use is applied to the interlock system,<br>including interruption of the supply, only one defect<br>being simulated at a time |                 | N/A     |
|  |                 |         |

|         |  | 1        |
|---------|--|----------|
|         | The guard is opened to the extent needed to cause<br>the interlocking to operate and is then closed, the<br>number of operations being defined in the specific<br>Part 2   | N/A      |
|         | After this test any defect that may be expected in<br>normal use is applied to the interlock system,<br>including interruption of the supply, only one defect<br>being simulated at a time   | N/A      |
|         | After these tests the interlock system is fit for further use  | N/A      |
| 22.ZE.7 | Adjustable guards restricting access to areas of the moving parts strictly necessary for the work are:   | N/A      |
|         | - adjustable manually or automatically, depending on the type of work involved, and  | N/A      |
|         | - readily adjustable without the use of tools  | N/A      |
| 22.ZE.8 | In case of interruption, re-establishment after an interruption or fluctuation in whatever manner of the power supply, the appliance does not restart  | N/A      |
|         | However, automatic restarting of the operation is<br>allowed if the appliance may continue to operate,<br>without causing any hazard to the user, from the<br>same point in its operating cycle at which the<br>voltage interruption or fluctuation occurred | N/A      |
| 22.ZE.9 | Appliances fitted with means to isolate them from all energy sources   | N/A      |
|         | Such isolators are clearly identified, and   | N/A      |
|         | they are capable of being locked if reconnection<br>endanger persons   | N/A      |
|         | After the energy source is disconnected, it is<br>possible to dissipate any energy remaining or<br>stored in the circuits of the appliance without risk to<br>persons  | N/A      |
