1 CONCLUSION

The equipment under test (EUT) does meet the essential requirements of the EMC Directive 2004/108/EC.

The conclusion and results stated in this test report are based on a non-recurrent examination of sample(s) provided by the applicant.

1.1 Model description

The apparatus as supplied for the test is a bucket mixer; model AM5000 intended for residential use. This product has electronic control circuit and earth connection.

According to the declaration from manufacturer, models AM5000 and AM5000NC identical except the model name.

Due to the similarity between them, model AM5000 was selected for the full tests and the corresponding data is representative for model AM5000NC as well.

Figure 1 Overview

Figure 2 Overview

Figure 2 Internal view

The operating modes as stated in the user manual are on and off modes.

1.2 **Environment**

The requirements and standards apply to equipment intended for use in:

✓	Residential (domestic) environment
✓	Commercial and light-industrial environment
	Industrial environment
	Medical environment

1.3 Classification

The standard EN 55014-2 is subdivided in four categories. For each category, the specific immunity requirements are formulated.

	Category 1	Apparatus containing no electronic control circuitry
✓	Category 2 Apparatus containing electronic control circuitry with no internal clock or oscillator frequency higher than 15 MHz.	
Category 3 Battery powered apparatus containing electronic co circuitry with no internal clock higher than 15 MHz.		Battery powered apparatus containing electronic control circuitry with no internal clock higher than 15 MHz.
	Category 4	All other apparatus.

-page 6 of 24-

2 **SUMMARY**

This chapter presents an overview of standards and results. Refer to the next chapters for details of measured test results and applied test levels.

2.1 **Applied standards**

Standard	Year	Title		
EN 55014-1	2006	Emission – Electrical motor-operated and thermal		
A1	2009	appliances for household and similar purposes, electrical		
A2	2011	tools and similar electrical apparatus		
EN 55014-2	1997			
A1	2001	Immunity - Household appliances, electric tools and similar		
A2	2008			
EN 61000-3-2	2006			
A1	2009	Limits for harmonic currents emissions		
A2	2009			
EN 61000-3-3	2008	Limitation of voltage fluctuations and flicker		

2.2 Overview of results

Emission tests	Result
Mains conducted disturbance voltage	PASS
Disturbance Power	PASS
Harmonic current emission	PASS
Limitation of voltage fluctuations (flicker)	PASS

Immunity tests	Result
Electrostatic Discharges (ESD)	PASS
Electrical fast transient (EFT)	
Surge transients	PASS
Conducted RF disturbances	PASS
Power supply voltage interruptions & dips	PASS

-page 7 of 24-

3 GENERAL INFORMATION

3.1 **Product Information**

Equipment under test	Bucket Mixer
Trade mark	AGP
Tested Type	AM5000,
Representative types	AM5000NC
Ratings	220-240 Vac; 50-60 Hz; 750 W; Class I

3.2 **Customer Information**

Applicant/Manufacturer	Lee Yeong Industrial Co., Ltd.
Contact person	Ms. Diane Wu
Telephone	+886 5 551 8689
Telefax	+886 5 551 8635
Address	No.2, Kejia Road, Douliu City, Yunlin County 64057, Taiwan

Factory	Lee Yeong Industrial Co., Ltd.
Contact person	Ms. Diane Wu
Telephone	+886 5 551 8689
Telefax	+886 5 551 8635
Address	No.2, Kejia Road, Douliu City, Yunlin County 64057, Taiwan

-page 8 of 24-

3.3 Test data

Location	on Global Certification Corp.				
Address No.146, Sec. 2, Xiangzhang Rd., Xizhi Dist., New Ta City 221, Taiwan					
Date	Oct. 2011				
Supervised by	Richie Tang				

3.4 Environmental conditions

Tests have been performed in a controlled laboratory environment, where the environmental conditions are maintained within the applicable ranges.

Ambient temperature	15 °C – 35 °C
Relative Humidity air	30% - 60%

Measurement Uncertainty

Conducted Emission Expanded Uncertainty: U = 3.38 dB Disturbance Power Expanded Uncertainty: U = 3.92 dB

-page 9 of 24-

No other significant emissions were measured at the frequency range of interest employing both the QP and AV detectors.

Refer to chapter 6 for the test set-up.

According to clause 4.1.2.3.2 (EN 55014-1):

Appliances are deemed to comply in the frequency range from 300 MHz to 1 000 MHz if both of the following conditions (1) and 2)) are fulfilled:

- 1) all emission readings from the equipment under test shall be lower than the applicable limits (Table 2a) reduced by the margin (Table 2b);
- 2) the maximum clock frequency shall be less than 30 MHz.

Conclusion:

-page 16 of 24-

4.4 Voltage fluctuations (Flicker)

Standard	EN 61000-3-3
Port	AC Mains supply
Voltage	230 V _{AC}
Mode	On mode

Equipment intended to be connected to 230/400 V_{AC} 50 Hz supply systems may not produce voltage fluctuations in the supply systems due to variation of the input current above the limits as stated below.

P _{ST}	Not applicable*
P _{LT}	Not applicable*
dt > 3,3%	≤ 500 ms
d _C	≤ 3,3%
d _{MAX}	≤ 7%

Results

Relative voltage change characteristic dt	0,0 ms
Maximum voltage change d _{MAX}	0,846%
Relative Voltage change d _C	0,375%
Short term flicker P _{ST}	Not applicable*
Long term flicker P _{LT}	Not applicable*

In addition, this test was conducted in accordance with Annex B of EN 61000-3-3.

Conclusion:

^{*} The EUT belongs to hand-held tools (portable tools without heating elements), according to EN 61000-3-3, clause A.9, P_{ST} and P_{LT} shall not be evaluated.

5 **IMMUNITY TEST RESULTS**

5.1 Electrostatic discharge immunity

Electrostatic discharges (ESD) are the result of persons or objects that accumulate static electricity due to for instance walking on synthetic carpets. The ESD can influence the operation of equipment or damage its electronics, either by a direct discharge or indirectly by coupling or radiation. Both effects are simulated during the tests.

Requirements

Standard	EN 55014-2
Basic standard	EN 61000-4-2
Port	Enclosure
Performance criterion	B; During the test degradation is allowed.
	No change of operating state or stored data is allowed.
Air discharges	8 kV
Contact discharges	4 kV
Mode	On mode

Performed tests

Air discharges	✓	4 kV	✓	8 kV		15 kV		
Contact discharges	√	2 kV	√	4 kV		8 kV		
Via coupling planes	√	Horizontal		√	Vertical			
Polarity	√	Positive		√	Negative			
Set-up	√	Table-top				Floor st	andin	g
Ambient temperature	21 °C							
Relative Humidity air	48%							

Observations

During the test no loss of performance was observed. After the test the EUT functioned as intended. No unacceptable loss of performance was observed.

Conclusion:

5.2 Electrical Fast Transient immunity

The EFT immunity test simulates disturbances by bursts of very short transients caused for example by switching off loads such as an AC motor or bouncing relay contacts. The transients are likely to disturb electronics but less likely to cause damage.

-page 18 of 24-

Requirements

Standard	EN 55014-2					
Basic standard	EN 61000-4-4	EN 61000-4-4				
Performance criterion	B; During the test degradation	B; During the test degradation is allowed.				
	No change of operating state or stored data is allowed.					
Pulse characteristics	5/50 ns					
Peak Voltage; Port	1 kV; AC input power port					
Repetition frequency	✓ 5 kHz 2,5 kHz					

Performed tests

Tested Voltage; Port	1 kV; AC input power port				
Mode	On mode				
Injection method	√	✓ CDN Capacitive clamp			
Polarity	√	Positive	✓	Negative	
Set-up	√	Table-top		Floor standing	

Observations

During the test no loss of performance was observed. After the test the EUT functioned as intended. No unacceptable loss of performance was observed.

Conclusion:

-page 19 of 24-

5.3 Surge transient immunity

The surge transient immunity test simulates the surges that are caused by overvoltages due to indirect (induced) lightning transients. The pulse is a slow transient with high-energy contents and due to its long duration may cause damage to an unprotected EUT.

Requirements

Standard	EN 55014-2
Basic standard	EN 61000-4-5
Performance criterion	B; During the test degradation is allowed.
	No change of operating state or stored data is allowed.
Pulse characteristics	1,2/50 µs
Peak Voltage; Port	1 kV; AC input power port (Line to line)
Feak Vollage, Full	2 kV; AC input power port (Line to earth)

Performed tests

Tested Voltage; Port	1 kV; AC input power port (Line to line) 2 kV; AC input power port (Line to earth)				
Mode	On mode				
Polarity	√	✓ Positive ✓ Negative			

Observations

During the test no loss of performance was observed. After the test the EUT functioned as intended. No unacceptable loss of performance was observed.

Conclusion:

-page 20 of 24-

5.4 RF Conducted immunity

During this test the immunity of the equipment for induced or conducted electromagnetic fields is checked. Fields generated by radio and other transmitters cause RF voltages in long cables like the mains network. This test reproduces these induced disturbing voltages by injecting them to the EUT via the cabling.

Requirements

Standard	EN 55014-2
Basic standard	EN 61000-4-6
Performance criterion	A; Operation as intended
Frequency range	0,15 – 230 MHz
Modulation	1 kHz – 80% AM
Test level; Port	3 V; AC input power port

Performed tests

Tested level; Port	3 V;	3 V; AC input power port				
Mode	On m	On mode				
Frequency range	0,15 – 230 MHz					
Dwell time	3 seconds					
Injection method	✓ CDN-M3 EM clamp					

Observations

During the test no loss of performance was observed. After the test the EUT functioned as intended. No unacceptable loss of performance was observed.

Conclusion:

-page 21 of 24-

5.5 **Power supply interruptions and dips**

Requirements

Basic standard	EN 61000-4-11
Performance criterion	B; During the test degradation is allowed.
	No change of operating state or stored data is allowed.
	C; Temporary, self-recoverable loss of function is
	allowed.

Standard	EN 5	EN 55014-2			
AC input power port			50 Hz	60 Hz	
	С	U _{NOM} – 30%	(25 periods)	(30 periods)	
Ao input power port	С	U _{NOM} – 60%	(10 periods)	(12 periods)	
	С	U _{NOM} – 100%	(0,5 period)	(0,5 period)	

Performed tests

Tested voltage	AC input power port	
Mode	On mode	
AC input power port	50 Hz	60 Hz
	U _{NOM} – 30% (25 periods)	U _{NOM} – 30% (30 periods)
	U _{NOM} – 60% (10 periods)	U _{NOM} – 60% (12 periods)
	U _{NOM} – 100% (0,5 period)	U _{NOM} – 100% (0,5 period)

Observations

During the test no loss of performance was observed. After the test the EUT functioned as intended. No unacceptable loss of performance was observed.

Conclusion:

-page 22 of 24-
